my boss, because that is how one should do it<sup>\*†</sup>

## 1 Abstract

My manuscript is about interesting research, and this is what we found.

## 2 Introduction

This and that is known already [1, 2, 3, 4]. Herein, we present some other new results.

## 3 Results and Discussion

Measuring this we got that. See Figure 1 and Table 1. With equation 1 we calculate  $\mathbf{x}$  and put it into equation 2.

$$\mathbf{x} = a + \Delta G_{free} \tag{1}$$

$$\begin{bmatrix} \psi^L \\ \psi^S \end{bmatrix} = \begin{bmatrix} I_2 & 0_2 \\ 0_2 & \frac{1}{2mc} (\boldsymbol{\sigma} \cdot \mathbf{x}) \end{bmatrix} \begin{bmatrix} \psi^L \\ \phi^L \end{bmatrix} \tag{2}$$

## 4 Conclusions

Our results show that we were right and our ideas can be applied here and there.

## 5 Experimental Section

We did our experiments under these conditions using machines w and x, and chemicals y and z. For calculations we used the calculates-whatever-you-want program [5].

## 6 Acknowledgment

We thank our research fund for the money.

## 7 Keywords

Keyword 1, keyword 2, keyword 3, keyword 4, keyword 5

## 8 TOC

This and that is shown (see picture 2) and can be used here and there.
